Supplemental Figure 1. Expression of IFN-inducible genes following TLR7 triggering is independent of an autocrine intracellular type I IFN pathway. PBMCs were incubated in medium with or without anti-IFN-α/βR neutralizing antibodies for 30 min or 60 min; cells were then untreated or stimulated with Flu or CL097 for 4 h. (A) TRAIL expression was evaluated by flow cytometry on BDCA2+ HLA-DR+ pDCs and (B) CXCL10 production was measured in culture supernatants by CBA.
Supplemental Figure 1
