

Additional file 1

Sequence logo showing the conservation of nucleotide positions across various species. The y-axis lists positions 1, 81, 161, 241, 321, 401, 481, and 561. The x-axis lists species: mip2, mip3, LplCorby, LP1Lens, mip1, LplParis, and LplPhil. Each position is represented by a sequence of colored bars (A, T, C, G) indicating the frequency of each nucleotide at that position.
